

Scientia Dashboards

Improving Management Information and Analytics

The data contained within your Scientia application represents a valuable asset to your institution.

Scientia's new Dashboard capability is specifically designed to put essential information at the fingertips of key decision makers within your institution. Information is displayed in real-time from any device presenting complex data in a visually engaging, easy to interpret format as a series of interactive charts and graphs.

Scientia's new Dashboard capability, available via browser or mobile device, offers:

Faster and more accurate decision making, by empowering staff with real-time information.

Drill down technology to quickly get to the root cause of issues and to intervene effectively.

Customised information in a range of visually engaging, easy to interpret graphical formats.

Instant alerts for any performance shortfalls, trends and opportunities.

A single holistic view of all management data from multiple sources and applications.

Scientia Dashboards display a comprehensive range of out of the box operational information, enhancing overall visibility of key performance metrics. Information is presented quickly and clearly in a personalised format that best suits the user's needs, offering a true self-service solution.

Drill-down technology enables users to quickly discover the root cause of potential issues in just a few simple clicks. It helps inform whether the right information is being captured, what drives excellent performance, and which metrics have the greatest impact on performance management and operational success.

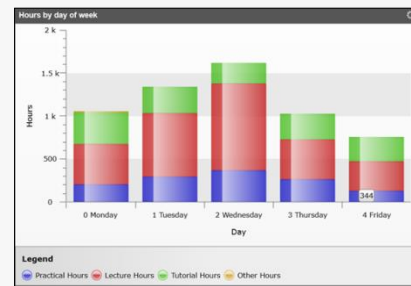

Proactive alerts can instantly flag shortfalls in performance, acting as an early warning system to potential issues and enabling corrective steps to be taken quickly when performance dips below desired levels. Positive trends and opportunities are also highlighted.

Dashboards also offer the option to consolidate information from a range of additional data sources including student record, finance and HR systems to provide a single access point for enterprise reporting, performance management, planning and budgeting.

A range of dashboard views are available including:

Teaching delivery by department

Enabling users to review the organisational structure of teaching events by department, week, day and even time. Complete analysis of the spread of teaching activities across the entire institution or department by department showing the most and least popular days and times for activity types to support strategic planning.

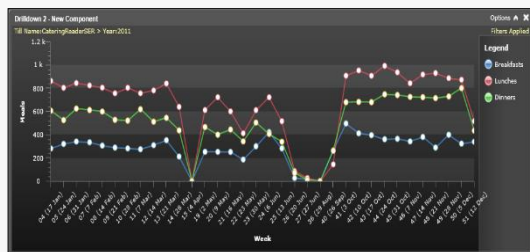

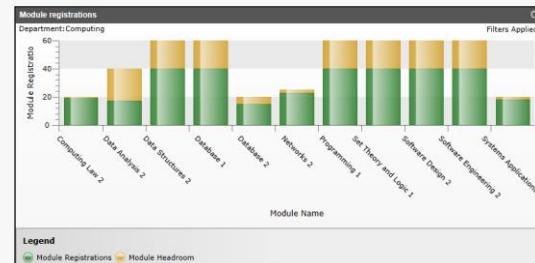

Teaching space utilisation

Providing users with a high level overview of how the teaching load is spread across the entire site with the ability to instantly drill down to view information to support more effective space utilisation for specific locations, buildings and rooms during specific days and times.

Student registrations

Offering a full departmental analysis of programmes of study with instant dashboard visibility of overall program and individual module registrations versus headroom to help with future planning and particularly effective during the clearing process.

Customisable business intelligence

Providing institutions with the technology to easily create customised dashboard views of key performance metrics specifically relevant to the institution. Include data from a range of different sources and applications to provide a single access point for enterprise reporting, performance management and planning.
